Engine Pulley Application Guide

With the increasing use of serpentine drive belts on late model engines, more idler and tensioner pulleys are being sold than ever before.

Many of these pulleys are manufactured from molded plastic to reduce cost. However, plastic offers limited durability when exposed to abrasive dirt, heat or when excessive belt tension is applied.

All engine pulleys incorporate roller bearings that run at very high revs relative to engine speed. Increasing belt load and exposure to dirt or moisture accelerates bearing wear.

NULINE engine pulley designs replace molded plastic with SG Iron (the same material used in harmonic balancers) or pressed steel offering far greater strength and resistance to wear when exposed to dirt. Special attention in manufacture is given to belt face contours and dimensions to ensure drive belt compatibility.

All roller bearings used are from OEM manufacturers and feature C3 rated high speed races, high temperature lubricant and heavy duty silicone seals for maximum service life at high RPMs.

The combination of these engineering features at a very economical price has made NULINE the number one choice for Australian vehicle repairers.

The NULINE pulley range has grown rapidly from a range of just 14 part numbers to over 120 numbers listed in this new catalogue. All popular domestic, Japanese and US based 4, 6 cylinder and V8 applications are covered by this new range. Many popular imports, 4wd and light commercial applications that are particularly prone to pulley failure are also included.

PRECISION PARTS

THE NAME BEHIND NULINE ENGINE PULLEYS

Precision Parts is an all-Australian company based in Wagga Wagga New South Wales. The company's rapid growth over more than 25 years can be attributed to the constant range development reflected in this new catalogue.

Our staff use state of the art CAD design and 3D modelling software combined with the worlds best CNC machining centres and fully automated assembly facilities to produce the new range of Nuline engine pulleys.

The overriding objective of Precision Parts constant program of plant and equipment upgrades is to provide an Australian made product of exceptional quality at the most competitive price. Precision's commitment to totally quality control has been formalised with the independent certification that the quality management systems comply with ISO9001-2000

Precision Parts will continue to lead market demands in Australia and overseas for new products and applications. If a particular engine pulley you require is not listed in this catalogue we would appreciate your feedback to assess the model for future inclusion in the Nuline Pulley range.
